

Website Traffic Analysis Dashboard...

Prepared by : Priyanshu Bisht

Internship : Data Analytics- InternSpark

Objective

Analyze website traffic logs to identify user behavior, top-performing countries, cities, artists, and tracks, and provide recommendations to improve website engagement.

The main objective of this project was to:

- Analyze website traffic logs.
- Understand user interactions through different event types.
- Identify the countries and cities generating the highest traffic.
- Find the most popular artists and tracks.
- Build an interactive dashboard to present the findings clearly.
- Recommend improvements to increase user engagement and website performance.

Data Preparation & Cleaning

Before performing the analysis, the dataset was cleaned to improve consistency and accuracy.

The steps were performed:

- Checked the dataset for duplicate records.
- Verified date formatting.
- Reviewed each column for inconsistencies.
- Replaced blank values with NA where necessary.
- Verified event categories such as Click, Pageview, and Preview.
- Organized the dataset for analysis using Pivot Tables.

Dashboard

The dashboard includes:

- Total Events
- Total Countries
- Total Cities
- Top Artist

Key Insights

After analyzing the dataset, the following observations were made:

- **Pageview** was the most common user event, indicating users mainly browsed website content.
- The **United States** generated the highest amount of website traffic.
- **Jeddah** was the leading city in terms of traffic.
- **Tesher** was the most viewed artist.
- **Jalebi Baby** was the most frequently accessed track.
- A significant number of records contained **NA** values, suggesting missing information that should be improved in future data collection.

Recommendations

Based on the analysis, the following recommendations are suggested:

- Improve data collection to reduce missing (NA) values.
- Increase engagement strategies to convert pageviews into more user interactions.
- Focus marketing campaigns on high-traffic countries and cities.
- Promote top-performing artists and tracks to maximize user engagement.
- Regularly monitor website traffic through dashboards for better business decisions.

The Takeaway

- This project strengthened my skills in **Excel, data cleaning, Pivot Tables, dashboard creation, and data visualization**. It also improved my ability to interpret website traffic data and convert raw information into actionable business insights. The experience enhanced both my analytical thinking and my ability to communicate findings through professional reports and dashboards.
